

TROPICAL DEPRESSION 11

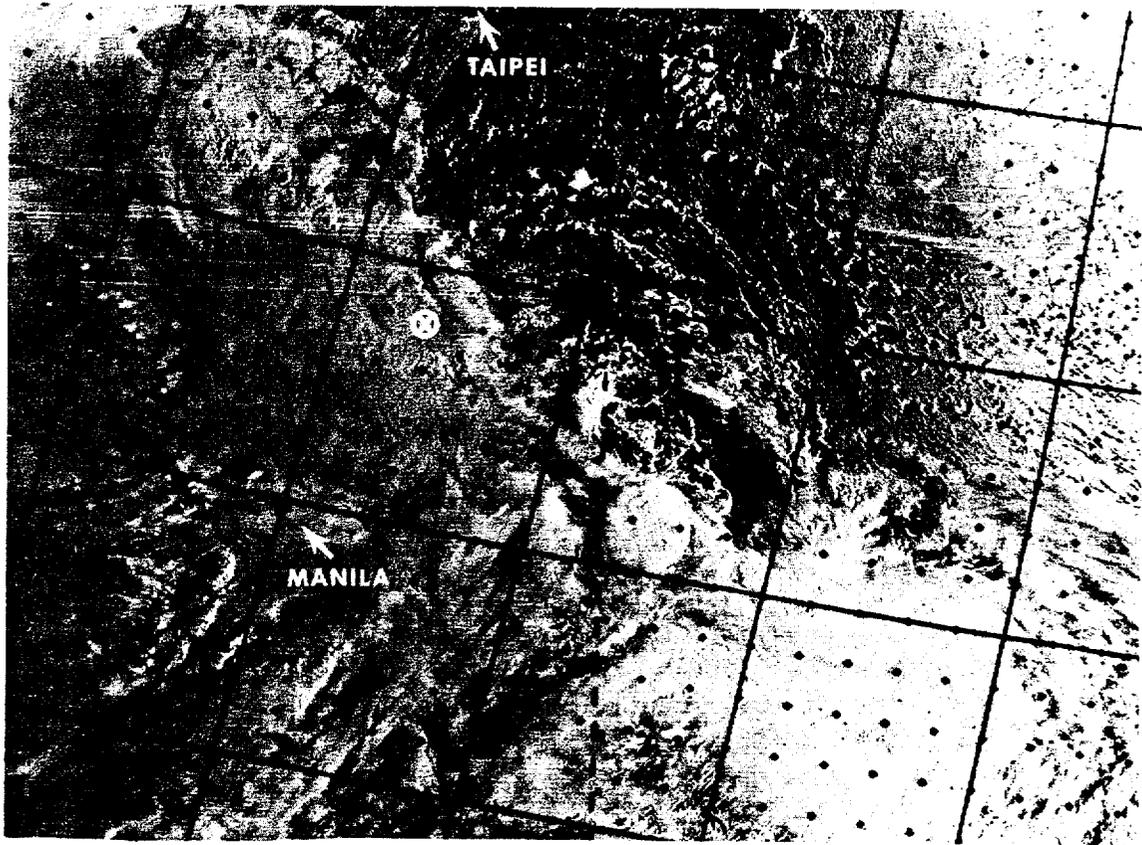

FIGURE 3-11-1. Tropical Depression 11 at 20 kt (10 m/sec) intensity, 5 August 1979, 2153Z. The TD symbol (⊙) is superimposed at location of surface circulation center as determined by aircraft reconnaissance at 052222Z. Considerable vertical shear existed over the system and was the reason that it did not develop into tropical storm strength. (DMSP imagery)
